

USER REGISTRATION

software

CONORG

Consulting & Organising Company

Features

REGISTRATION

Users can easily register and become members all from the front-end of your site. Logged in users will never see the admin dashboard and will have no idea they are on the cloud site.

| | |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Registration status | Decide a person's status after registering on your site. You can allow users to be auto-approved, require email activation or be manually approved by the admin. |
| Registration action | You can select the action that is taken after a person registers on your site. You can redirect them to their profile or redirect them to a custom url. |
| Role assignment | You can assign a user role to a registration form so that anyone who registers using that form will automatically be assigned that specific role. |
| Multiple registration forms | You can create multiple registration forms for your site so each user role has a unique registration form. |
| Role selection | You can add a role selector field to the register form so users can select the role they want before they register. |
| Default user role | You can assign a user role to be the default user role when users sign up on your site. |

LOGIN

Users can effortlessly login from the front-end of your site.

| | |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Password reset link | The login form provides a forgot password link which will take users to the password reset form if they have forgotten their password |
| Customizable | The login form is fully customizable including: changing button text, hiding the register button from login form, applying custom styling and much more. |
| Anti-spam measures | The login forms automatically come with triple anti-spam protection which includes: a hidden honeypot field, time delay on submit. |

USER PROFILES

Add beautiful user profiles to your cloud hosted site which can be fully customized to your site's specific requirements.

| | |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Custom appearance | The user profiles are fully customizable so you can give your profiles a unique look including changing the cover photo aspect ratio, profile photo shape and much more. |
| Remove cover photos | Don't want cover photos? Software provides an alternative user profile design if you do not want to include cover photos on the profile. |
| User info | You can highlight important user info in the header section of profile by selecting from your specific fields from your fields list. If left blank no user info will show in header. |
| User bio | The profile header also includes a user bio area where users can write a short description about themselves. This can be turned off if you don't need user bios. |
| Display name | You can select the display name for users on your site. The plugin offers a range of options you can choose from including: username; first and last name and others. |
| Profile permalinks | You can select what slug appears in the url when viewing user's profiles. You can select to show: username, first and last name or user id. |

USER ROLES

With software you can create multiple user roles and give each role its own permissions and capabilities making the plugin the perfect choice if you are creating a site that requires more than one user type.

| | |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Administrative permissions | Allows you to decide whether a role can have admin privileges such as access to wp-admin. If they can't access the wp-admin the WP toolbar at top of site will not appear. |
| General permissions | Choose whether you want a role to be able to edit or delete their own profiles. E.g you can stop users from being able to delete their own account if only the admin can delete accounts. |

| | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Profile access | Decide whether a role can view other user's profiles or only certain role profiles. Very useful if you want to limit which user roles are be able to view other profiles. |
| Homepage | Decide whether a user role can view your site's homepage when logged in. If not, you can set a url where they will be redirected to if they try to access the homepage. Useful if your homepage is a landing page for sign ups. |
| Registration | Decide whether a user role can automatically register on your site, needs to click an activation link in an email or requires manual admin approval. You can also decide what happens after they register including custom url redirection. |
| Login | Allows you to choose what happens after a user with this role logs in to your site. You can direct them to their profile, a custom url, refresh the active page or to the website admin. |
| Logout | Allows you to choose what happens after a user with this role logouts of your site. You can redirect them to your site's homepage or to a custom url. |
| Delete | Allows you to choose what happens after a user with this role deletes their account. You can redirect them to your site's homepage or to a custom url. |

MEMBER DIRECTORIES

Allow users to find each other with ease using our advanced member directories

| | |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Display certain roles | You can select which user roles to show in the member directory. Any users who don't have that role(s) will be excluded from showing in the directory. |
| Profile/cover photos | You can decide to only show users in the directory who have uploaded a custom profile photo and/or cover photo. |
| Sort users | You can decide what order to show users in and the plugin provides a range of sort options including: newest users first, oldest users first, first name, last name. |
| Show/hide cover photos | You can choose to show/hide cover photos from showing on the member directory. You can also hide profile photos. |
| Display user info | You can show user information on the member directory and show this information by default or in a reveal section. |

| | |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Social icons | You can choose to show social icons for each user on their profile card on the directory. These social icons are linked to the social fields in the pre-defined field list. |
| Search options | You can turn on search filters if you want users to be able to perform a custom search of other users. You can also restrict the ability to certain user roles. |
| Search filters | Select the number of filters you want to show by selecting from a list of your custom fields and the predefined fields. |
| Profile cards per page | You can select how many profile cards to show per page and also select the total number of profile cards to show. |

USER ACCOUNTS

Allow members to easily manage their own accounts directly from the front-end of your site

| | |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Account tab | The account tab allows users to change their first and last name, as well as updating their email address. |
| Change password tab | This tab allows users to change their password. For added security, users must enter their original password before they can change their password. |
| Privacy tab | This tab allows users to control their profile's privacy. User's can make their profile private and they can also hide their profile from showing in member directories. |
| Delete account | This tab allows users to delete their own accounts. For added security, users must enter their password before deleting their account. |
| Disable tabs | As an admin you can disable certain tabs from showing on the account page. E.g you can stop users from changing their password by disabling the change password tab. |

EMAILS

Software provides customizable email templates for each email that can be sent to users after a certain event/trigger happens. The plugin provides extra flexibility by allowing you to activate/deactivate each email type from being sent to users

| | |
|---------------------------|-----------------------------------------------------------------------------------------------------------------|
| Account welcome email | This email will be sent to users after they have successfully become a member of your site |
| Account activation email | This email will be sent to users if they are required to activate their account after registering on your site. |
| Pending review email | This email will be sent to users who are awaiting for their account to be approved by an admin. |
| Account approved email | This email will be sent to users after their account has been approved by an admin. |
| Account rejected email | This email will be sent to users after their account has been rejected by an admin. |
| Account deactivated email | This email will be sent to users if their account has been deactivated by an admin. |
| Account deleted email | This email will be sent to users after they delete their own account. |
| Password reset email | This email will be sent to users if they have requested to reset their password. |
| Email tags | The plugin allows you to add email tags to the email templates to personalize the emails e.g {display_name}. |

PRIVATE MESSAGES

Add a private messaging system to your site and allow users to privately message each other. Perfect for websites where users need to interact one on one.

Key Features

- Allows users to send private messages to other users
- Adds a message button to user profiles which lets users send a private message to that user via messages modal
- Adds a messages tab to each user profile so users can view all conversations and read/send private messages from profile
- Automatic refresh of private messages
- Ability to add emoticons to each private message easily
- Option to set a maximum number of characters allowed in each conversation reply
- Adds option to user account page for users to decide if they want to receive private messages or not
- Sends an e-mail notification to users when someone starts a new conversation with them

- Adds option to user account page so users can turn on/off receiving an e-mail notification for new conversations
- Control which user roles can use private messages
- Control which user roles can send or receive private messages
- Limit the number of new conversations a user role can create within a certain timeframe
- Includes block feature so users can block specific users from messaging them and also provides a way to unblock users from account page
- Messages accept plain text, with urls automatically converted into links (No other HTML is accepted in messages)
- Show unread messages count in your menu easily using the {new_messages} tag

Integrations with other extensions

- Followers - Users can decide to let only users who follow them to message them.
- Real-time Notifications - Users can receive a notification when someone starts a new conversation with them.
- Online users - Shows a green dot next to user when user is online
